                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-08-587-680A-2

Sequence 2, Application US/08587680A

Sequence 2, Application US/08587680A

Parent No. 5977434.

GENERAL INFORMATION:

APPLICANT: Ronald, Pamela C.

APPLICANT: Wang, Wen-Yuang

APPLICANT: Szabo, Weronique

TITLE OF INVENTION: Procedures and Materials for Conferring

TITLE OF INVENTION: Disease Resistance in Plants

NUMBER OF SEQUENCES: 27

CORRESPONDENCE ADDRESS:

ADDRESSEE: Townsend and Townsend and Crew LLP

STREET: Two Embarcadero Center, Eighth Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "Xaa = Leu when position 5471 of RRK-F = G or Phe when position 5471 of RRK-F = C"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 14, Application US/08710749
Patent No. 5955089
GENERAL INFORMATION:
PAPLICANT: Briles, David E.
APPLICANT: Hollingshead, Susan
APPLICANT: Becker, Robert
TITLE OF INVENTION: STRAIN SELECTION OF PNEUMOCOCCAL SURFACE
TITLE OF INVENTION: PROTEINS
NUMBER OF SEQUENCES: 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Indels
                                                                                                                                                                                                                                                                                                                  0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 99;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
RPPLICATION NUMBER: US/08/710,749
FILING DATE: 20-SEP-1996
CLASSIFICATION: 435
                                                                                                                                                                                                                                                                               DB 2;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 99, Application US/09228986
Patent No. 6359198
Regneral INFORMATION:
APPLICANT: Strabala, Timothy
APPLICANT: Nieuwenhuizen, Niels
TITLE OF INVENTION: Compositions Isolated from Plant Cells
TITLE OF INVENTION: UNMBER: US/09/228,986
CURRENT APPLICATION NUMBER: US/09/228,986
SURRENT APPLICATION NUMBER: US/09/228,986
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NOS: 130
SEQ ID NOS: 130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Sequence 20, 3, Application US/09228986

Patent No. 6355198

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Strabala, Timothy

APPLICANT: Nieuwenhuizen, Niels

TITLE OF INVENTION: and Their Use in the Modification of Plant Cell Signalling

FILE REFERENCE: 11000/1020

CURRENT APPLICATION NUMBER: US/09/228,986

CURRENT APPLICATION NUMBER: US/09/228,986

CURRENT FILIG DATE: 1999-01-12

NUMBER OF SEQ ID NOS: 130

SOFTWARE: FastSEQ for Windows Version 3.0

LEWGTH: 198

TYPE: PRT

```
The present invention describes secreted and transmembrane polypeptides and their polypucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Yuan J,

This is the amino acid sequence of PRO285, a novel human homologue of Drosophila Toll protein, that acts as a pathogen pattern recognition receptor, sensing the presence of conserved molecular structures present on microorganisms. The sequence was deduced from isolated cDNA clone DNA40021-1154 (ATCC 209389) (see AAX58295). The livention provides 3 novel cDNA clones that encode novel human Toll polypeptides PRO286, PRO286 (see AAY05867) and PRO358 (see AAY05868). It also provides specific antibodies and chimeric molecules comprising a PRO285, PRO286 or PRO358 polypeptide, or a transmembrane domain-deleted or inactivated variant, fused to a heterologous amino acid sequence, such as an epitope tag or immunoglobulin Fc region. Being homologues of Drosophila Toll
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human Toll-like receptors that recognize microbial structures

protein, the 3 human proteins are likely to be involved in adaptive immunity, particularly inflammation, septic shock, and response to pathogens in diseases aggravated by the immune response, such as diabetes, amyotrophic lateral sclerosis, cancer, rheumatoid arthritis and ulcers. The PRO polypeptides are used to identify other proteins involved in Toll-mediated signal transduction (e.g. natural ligands), to screen for receptor and ligand mimics, and to generate antibodies. Antibodies specific for the PRO polypeptides (or for the known receptor TLR-2) are used to treat septic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                150

AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting the polypeptide for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78877 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -

```
ANULI172-AAU12446 represent novel human secretory and transmembrane
PRO polypeptides. The PRO polypeptides are useful to detect other
PRO polypeptides, to link bloactive molecules to cells expressing
PRO polypeptides, to modulate bological activities of cells expressing
PRO polypeptides, and to detect the presence of mammalian lung, colon,
breast, prostate, rectal, cervical or liver tumours by comparing PRO
polypeptide expression in a cell sample to that in a control sample.
Some of the 275 sequences are also useful to stimulate the release of
tumour necrosis factor alpha (TNF alpha) from human blood, the
proliferation or differentiation of chondrocytes, the proliferation or
gene expression in pericyte cells, the release of proteoglycans from
cartilage, the proliferation of funer car utricular supporting cells or
of T-lymphocytes, the release of a cytckine from peripheral blood
monocytes (PBMCs), or the proliferation of endothelial cells. Some of
the PRO polypeptides may modulate glucose or free fatty acid uptake by
skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide
to factor VIIA. The PRO polypeptides can be used in assays to identify
molecules involved in binding interactions. The polymucleotides encoding
PRO polypeptides can be used to generate probes, antisense RNA/NNA,
transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                      3
                                                                                                                                                                                                                                                                                                                                         Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bloactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g. lung, breast, prostate, cervical

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is human DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate
                                                                                                                                                                                                                                                                                                                                                               DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate

```

```
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                     Single exon nucleic acid probes for analyzing gene expression in human brains -
                                                                                                                                                                                                                                                                                                                                                 SEQ ID NO: 30447; 650pp + Sequence Listing; English.

The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating to a meliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, croheritis (b) immune disorders e.g. Addison's disease, allergies, croher's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders ^{\circ}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2520 GACTTGTGTGGGGCCAGGAGCACAAGGGCCAAAGTGTGATCTCCCTGG 2569

The invention relates to novel isolated polypeptides (I), and the invention relates to novel isolated polypeptides (I), and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune transplant rejections and graft versus host disease. Infectious diseases (e.g. transplant rejections and graft versus host disease, infectious diseases (e.g. transplant rejections and graft versus host disease, infectious diseases. (e.g. transplant redeated disorders (alsorders, primary haematopoletic disorders, hyperproliferative disorders, primary haematopoletic disorders, hyperproliferative disorders (e.g. disorders (e.g. disorders (e.g. stroke), renal abormalities (bown syndrome), ischaemic injury (e.g. stroke), renal alsorders (e.g. gloomerulonephritis), cardiovascular disorders (e.g. disorders (e.g. gloomerulonephritis), cardiovascular disorders (e.g. dasoase), reproductive system disorders (arithalmaltory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of trocalis, to induce higher affinity antibodies, and as a means to induce tumour proliferation in pathologies eg acquired immune deficiency syndrome (AIDS). ANUI7081 sepresent novel signal transduction con the pathologies of the invention.
prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2619
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2669

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAM90355;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human polynuclectides (AAI63803-AAI64012) and the encoded proteins (AAM34497-AAM3660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful for diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2470 TGGTGGGTTAACCATACGGAGGTGACTATTCCTTACCTGGCCACAGATGT 2519
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2520 GACTTGTGTGGGGCCAGGAGCACACAAGGGCCAAAGTGTGATCTCCCTGG 2569

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Claim 11; SEQ ID NO 17948; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased extraction by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

                                                                                                                                                                                                                               Sequence
     diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK54950 and AAM81269 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; Interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;

The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is mouse DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins. The DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate immunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Lung antigen protein; human; mouse; rabbit; goat; horse; cat; dog; chicken; sheep; immunosuppressive; antiarthritic; vasotropic; antirhentatic; vasotropic; antiproliferative; cytostatic; cardiant; neuroprotective; cerebroprotective; nootropic; antibacterial; virucide; fungicide; cancer; ophthalmological; vulnerary; gene therapy; autoimmune disease; neoplasm; hyperproliferative disorder; breast; liver; cardiovascular disorder; cerebrovascular disorder; neurons system disorder; adorder; haction; fungal infection; fungal disorder; capitratory disorder; wound healing; skin aging; corgan transplantation; food preservative; tissue regeneration; anti-infertility; food additive.
Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate

Sequences AAS29839-AAS2930 represent the lung antigen polypeptides of the invention. Lung antigen polypeptides and their associated CC the invention. Lung antigen polypeptides and their associated CC polypucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a lung antigen co by detecting the presence or absence of a mutation in a lung antigen co polypucleotide. The treatable disorders include autoimmune diseases such cas rheumatoid arthitis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cerebral isorders such as premature labour, gastrointestinal disorders such as conseal infection, endocrine disorders such as premature labour, gastrointestinal disorders such as conseal infection, endocrine calsorders such as asthma and pleurisy. The polypeptides can calso be used to ald wound healing, to prevent skin aging due to sunburn, comaintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or companies or increase or decrease storage capabilities.

Committed to increase or decrease storage capabilities.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Wipo at ftp. wipo. int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect;
                                            Isolated polypeptide for treating, preventing and/or prognosing respiratory disorders related to the lung including lung cancers and also for testing and detection e.g. diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seq_name: /SIDS1/gcgdata/geneseq/geneseqp·emb1/AA1999.DAT:AAW86355

The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is partial mouse DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (5); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins. The DTLR proteins can be used to acid measure of the DTLR proteins. The DTLR proteins innate to alter phosphate metabolism, to modulate inflammatory function, innate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin I receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect; immunological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                   Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1999.DAT:AAW86362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length: 16

The present invention specifically describes human DNAX toll-like receptors 2 to 10 (PTR2-10). The present sequence is mouse DTLR6 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate immunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide hormone; antidiabetic; anorectic; antianorectic; antiasthmatic; antidepressant; nootropic; neuroprotectant; hypotensive; hypertensive; cytostatic; cerebroprotective; vasotropic; human.
                                                                                                                                            Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate

The invention provides polypeptides (AAG65886-65918) which may be peptide hormones (including insulin, growth hormones, chemokines, cytokines, concurrents integrins, kallikreins, lamins, melanins, natruiretic concurrents, neuropeptides, integrins, kallikreins, lamins, melanins, prostaglandins, concertogranins, selectins, thromboglobulins, thymosins) identified by high throughput genome-based biology and polynucleotides (AAI67176-67208) conception them. The polypeptides can be expressed by standard recombinant concurrent and hypotension, obesity, builmia, anorexia, growth abnormalities, as diabetes, breast-, prostate-, colon cancer and other malignant tumors, hyper- and hypotension, dementia, delirium, mental retardation, asthma, manic depression, dementia, delirium, mental retardation, consexual development disorders, and dysfunctions of the blood cascade or sexual development disorders, and dysfunctions of the blood cascade or system including those leading to stroke. The polynucleotides may be used as diagnostic reagents through detecting mutations in the associated gene and for chromosome localization and for tissue expression studies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide hormone; antidiabetic; anorectic; antianorectic; antiasthmatic; antidepressant; nootropic; neuroprotectant; hypotensive; hypertensive; cytostatic; cerebroprotective; vasotropic; human.

The invention provides polypeptides (AAG65886-65918) which may be peptide hormones (including insulin, growth hormones, chemokines, cytokines, neuropeptides, integrins, kallikreins, lamins, melanins, neturiretic neuropeptides, integrins, kallikreins, lamins, melanins, neuropeptides, integrins, kallikreins, lamins, melanins, prostaglandins, secretogranins, selectins, thromboglobulins, thymosins) identified by high throughput genome-based biology and polynucleotides (AA167176-67208) encoding them. The polypeptides can be expressed by standard recombinant methodology. The polypeptides are useful in the treatment of disease such as diabetes, breast, prostate-, colon cancer and other malignant tumors, hyper- and hypotension, obesity, bulimia, anorexia, growth abnormalities, as thum, manic depression, dementia, delirium, mental retardation, luntington's disease, Tourette's syndrome, schizophrenia, growth, mental or sexual development disorders, and dysfunctions of the blood cascade system including those leading to stroke. The polynucleotides may be used as diagnostic reagents through detecting mutations in the associated gene and for chromosome localization and for tissue expression studies. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene therapy;
                                                                                                                                                                        Smith RF, Xiang Z, Kabnick KS;

The present sequence is numan leucine-Tion repeat (LKR) signature development, ships to residues 252-265 of LKR protein.

C development, ships transduction, DNA repair, recombination, immune responses and transcription. LKR DNA and protein are useful for treating, proventing haemophilia, bleeding disorders (Bernard-Soulier syndrome), mycoratial infarction, thromboasis, attherosclerosis, glomerular diseases, angloplasty-related restences; viral infections, melanomas, immunological disorders (rheumatoid arthritis, multiple sclerosis, periodontitis); wound healing, burns, ulcers, inclisions and cancer.

C proviestis, systemic lupus erythematosus, inflammatory bowel disease, periodontitis); wound healing, burns, ulcers, inclisions and cancer.

C IRR is also useful for proliferation of neural cells and nerve creperation, for treating peripheral nervous system diseases, Huntington's disease, amyotrophic lateral sclerosis and Shy-Drager syndrome);

C disease, amyotrophic lateral sclerosis and shy-Drager syndrome;

C inflammatory response syndrome (SIRS)), ischaemia-reperfusion injury,

C inflammatory response syndrome (SIRS)), ischaemia-reperfusion injury,

C andotoxin lethality, arthritis, complement-mediated hyperacute rejection,

C cerebrovascular diseases (stroke); Huy lung or liver fibrosis,

C anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock,

C chronic inflammatory arthritis, permental disease, inflammatory diseases.

C pulmonary disease, other autoimmune diseases or inflammatory diseases.
                                                                      multiple sclerosis; psoriasis; systemic lupus crythematosus; burn; ulcer; inflammatory bowel disease; wound healing; cancer; Alzhelmer's disease; parkinson; disease; cerebrovascular disease; stroke; HIV; fibrosis; lung; liver; nephritis; Crohn's disease; anaphylaxis; hypersensitivity; acute pancreatitis; diabetes mellitus; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
myocardial infarction; thrombosis; atherosclerosis; glomerular disease;
angioplasty-related restenosis; viral infection; rheumatoid arthritis;

The invention Figures to immune recognition, cell adhesion, development, signal transduction, DNA repair, recombination, adhesion, development, signal transduction, DNA repair, recombination, immune responses and transcription. LRR DNA and protein are useful for treating, preventing haemophilia, blending disorders (Bernard-Soulier syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular diseases, anjoiplasty-related restenosis, viral infections, melanomas, immunological disorders (rheumatoid arthritis, multiple sclerosis, psoriasis, systemic lupus erythematoid arthritis, multiple sclerosis, periodontitis); wound healing, burns, ulcers, incisions and cancer. LRR is also useful for proliferation of neural cells and nerve regeneration, for treating peripheral nervous system diseases, (Alzheimer's, Parkinson's disease, Huntington's creprovas system diseases (Alzheimer's, Parkinson's disease, Huntington's mechanical and traumatic disorders (spinal cord disorders, head trauma) cerebrovascular diseases (stroke); HIV, lung or liver fibrosis, mechanical and traumatic disorders (spinal cord disorders, head trauma) cerebrovascular diseases (stroke); HIV, lung or liver fibrosis, irritation associated with infection (septic shock, sepsis or systemic inflammatory response syndrome (STRS)), ischaemia-reperfusion injury, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, complement-mediated hyperacute rejection, disease, methality, arthritis, complement-mediated hyperacute rejection, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, disease, methality, arthritis, complement-mediated hyperacute rejection, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, and protection associated with indection diseases and protection diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nephritis, cytokine or chemokine induced lung injury, Crohn's disease, anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock, chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammation associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect; immunological disorder.
atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             present sequence is human garp protein used in the exemplification

     The present invention specifically describes human DNAX toll-like receptors 2 to 10 DTLA2-10). The present sequence is human DTLRIO given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a portion or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (3); can be used to produce the DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate used into the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunomodulatory; human immunodeficiency virus; HIV; anaemia; angina; rheumatoid arthritis; antiarteriosclerotic; cardiant; vascular; cerebroprotective; thrombolytic; antimicrobial; ophthalmological; cytostatic; Alzheimar's disease; Parkinson's disease; human; cancer; multiple sclerosis; cancer; hyperproliferative disorder; infection; Gaucher's disease; neurological disease; cerebrovascular disorder; thrombosis; wound healing.
                                                                                                                                                         Human DNAX toll-like receptors, DTLR 2-10 - used to, e.g. alter phosphate metabolism, modulate inflammatory function or innate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA2001.DAT:AAU20527

The invention relates to novel isolated nucleic acid molecules (I)

cncoding human secreted proteins (I). (I) and (II) are used to prevent,

treat or ameliarate a medical condition in e.g. humans, mice, rabbits,

gaats, horses, cats, dogs, chickens or sheep. (I) and (II) may be used in

the prevention, treatment and diagnosis of diseases associated with

cneptopriate expression of secreted proteins. (I) and complementary

caquences may also be used as DNA probes in diagnostic assays (e.g.

polymerase chain reactions (PCR)) to detect and quantitate the presence

of similar nucleic acid sequences in samples. (I) and complementary

consists and antagonists) of the expression and so which patients may

consists and antagonists of the expression and activity of the secreted

proteins. The anti-(II) antibodies and antagonists may also be used as diagnostic agents for (II) may also be used as diagnostic agents for (II) The anti-(II) antibodies

consists and antagonists of the expression and activity of (II). The anti-(II) antibodies

consists and antagonists of the expression and activity of (II). The anti-(II) antibodies

consists and activity of (II). The anti-(II) antibodies

may also be used as diagnostic agents for detecting the presence of (II)

In samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The

disorders include for example: immuno-autoinume diseases (e.g. Human immunodeficiency virus) infections, anaemia, rheumatoid arthritis

and multiple sclerosis), cancers and hyperproliferative disorders (e.g. ardidac arrest, tachycardia,

carebrovascular disorders (e.g. cardidac arrest, tachycardia,

carebrovascular disorders (e.g. cardidac arrest, tachycardia,

agonists, antagonists and antibodies caused by bacteria, viruses and

(LRR) protein. LRR protein is involved in protein recognition, call adhesion, development, signal transduction, DNA repair, recombination, immune responses and transcription. LRR DNA and protein are useful for treating, preventing haemophilia, bleeding disorders (Bernard-Soulier syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular diseases, angioplasty-related restenosis, viral infections, melanomas, immunological disorders (rheumatoid arthritis, multiple scienceis, glomerular periodontitis); wound healing, burns, ulcers, incisions and cancer. LR is also useful for proliferation of neural cells and nerve response reating peripheral nervous system diseases, central nervous system diseases (Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scienceis and Shy-Drager syndrome); cerebrovascular diseases (Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scienceis and Shy-Drager syndrome); cerebrovascular diseases (Stroke); HIV, lung or liver fibrosis, inflammatory response syndrom (SIRS)), ischaemia-repetision injury, and productive inflammatory response syndrom (SIRS)), ischaemia-repetision injury, and productive injethality.
                                                                                                                                HIV; Human Immunodeficiency Vitus; haemophilis; bleeding disorder; myocardial infarction; thrombosis; atherosclerosis; glomerular disease; angloplasty-related restenosis; viral infection; rheumatodia arthritis; inflammatory bowel disease; wound healing; cancer; Alzheimer's disease; inflammatory bowel disease; wound healing; cancer; Alzheimer's disease; parkinson's disease; cerebrovascular disease; stroke; HIV; fibrosis; lung; liver; mephritis; Crohn's disease; anaphylaxis; hypersensitivity; acute pancreatitis; diabetes mellitus; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               endotoxin lethality, arthritis, complement mediated hyperacute rejection, nephritis, cytokine or chemokine-induced lung injury, Crohn's disease, anaphylaxis, hypersensitivity, acute pancreatitis, endotoxin shock, chronic inflammatory arthritis, pancreatic cell damage from diabetes mellitus type 1, graft versus host disease, inflammation associated with pulmonary disease, other autoimmune diseases or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                               Human; leucine-rich repeat protein-like; LRR; cytostatic; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present sequence is a fragment of human leucine-rich repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Arterburn MC, Tang YT,

The present sequence is a fragment of human leucine-rich repeat

(LRR) protein. LRR protein is involved in protein recognition, cell
adhesion, development, signal transduction, DNA repair, recombination,
amburner, signal transcription. DNA repair, recombination,
immune responses and transcription. LNR DNA and protein are useful for
treating, preventing haemophilia, bleeding disorders (Bernard-Soulier
syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular
syndrome), myocardial infarction, thrombosis, atherosclerosis, glomerular
contasis, systemic lupus erythematosus, inflammatory bowel disease,
psoriasis, systemic lupus erythematosus, inflammatory bowel disease,
ceeneration, for treating peripheral nervous system diseases, Huntington's
nervous system diseases (Alzheimer's, Parkinson's disease, Huntington's
disease, amyotrophic lateral sclerosis and Shy-Drager syndrome);
mechanical and traumatic disorders (spinal cord disorders, head trauma)
cerebrovascular diseases (stroke); HIV, lung or liver fibrosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; leucine-rich repeat protein-like; LRR; cytostatic; gene therapy; HIV; Human Immunodeficiency Virus; haemophilia; bleeding disorder; mycoardial infarction; thrombosis, atherosclerossis; glomenular disease; angioplasty-related restenosis; viral infection; rheumatoid arbritis; multiple sclerosis; psoriasis; systemic lupus erythematosus; burn; ulcer; inflammatory bowel disease; wound healing; cancer; Alzheimer's disease; Parkinson's disease; cerebrovascular disease; stroke; HIV; fibrosis; lung; liver; nephritis; Crohn's disease; anaphylaxis; hypersensitivity; acute pancreatitis; diabetes mellitus; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Liu C;
